Strengthen your Home - Home Hardening

Firebrand Safety Systems was founded in response to the latest codes and standards. We help home and business owners address their needs to make properties more resistant to wildfire.

How do we do this? By reducing the exposure of building and home structures to ignition sources in the event of a wildfire.

What is Home Hardening? Hardening your home means making your home and property stronger against the threat of a wildfire. We achieve this for our clients through the use of:

- Ignition resistant materials on the exterior of the structure
- Prevention of burning wood or embers from gaining entry to the vented spaces of the building
- Special screens in locations where the venting cannot be eliminated
- Fire suppression systems for exteriors
- Landscape planning for ground control
- Water source planning

Prepare for wildfire by scheduling a home and property assessment with our Sonoma Wildfire Mitigation Specialist. Your personalized assessment will include Property evaluation and Wildland Urban Interface (WUI) Risk Assessment, Home and Property Hardening and Mitigation Strategies and Defending your home and property and evacuation planning.

Talk to the professionals at Firebrand Safety Systems today to find out how we can support you. Call **707-303-7270**.

Fire Evacuation Planning - Firebrand's GO KITS

In an emergency evacuation, it's hard to gather up your essential belongings in time to leave your home quickly and safely. Our Sonoma fire preparation experts know that evacuating in the midst of a wildfire can be extremely scary and stressful. The last thing you need to worry about in a life-or-death emergency is gathering safety supplies.

That is where our **GO KITS** come in. We've created a streamlined product we like to think of as a **GO KIT** for homeowners, increasing your personal safety preparation. Drawing on experience in firefighting and construction, our Napa fire safety team selected a series of products for yourself and your family to utilize if evacuation becomes necessary.

Three **GO KITS** available: **First Responder** | **The Survivor** | **The Defender**

Visit Firebrand Safety Systems at **3632 Airway Drive, Santa Rosa** to pick yours up today.

Battery Storage & Solar Power - Power Generation

Recent years have seen significant progress and development in power generation, storage, and management solutions for residential properties and businesses. Firebrand Safety Systems help clients capitalize on these new developments to ensure their properties are equipped with the most cutting-edge upgrades and prepared for anything.

We work with clients in designing plans unique to their specific properties, including services such as: Battery storage set-up, Solar panel installation coordination, Solar power management and home battery management.

Partnering with the best! Recognizing concerns for Northern California residents, we have developed strategic partnerships with Sonnen, Kohler Power Generation, Cummins Power Systems and other companies. These partnerships enable us to deliver comprehensive power services and safety systems to our clients. We believe in making safer homes simpler by installing backup power you can count on. Interested in learning more about setting up an energy efficient back up power system for your home or business?

Contact us and we will set up a consultation to discuss your concerns and potential solutions.

We founded Firebrand Safety Systems to provide comprehensive solutions for the concerns home and business owners in our Northern California community face from wildfires and power shut-offs. As a total fire safety systems company, we are focused on the wellbeing of our community members. Our unwavering mission is to provide personal safety, emergency power generation, and property protection amid the uncontrollable and unforeseen circumstances surrounding wildfires.
